

Let's Take A Trip!!

Mrs. Dunham's Tech Math 2 Class

Note: Store ALL of your work on the Student drive in Mrs. Dunham's first period folder. I would also save it on another device such as a flash drive!

The Basics:

You are going to take a trip!! YAY! You must decide where you are going, how long, what for, etc... There will be a list of things you must decide before beginning your research! The main focus of this project is to plan a BUDGET!

The Budget:

This must be in an Excel Spreadsheet. I am going to give each of you a set amount of money to take your trip. These amounts may be different for each person. You will have to figure the most effective way to spend your money so that you get the most out of your trip! This may be tricky at times!!

Things that must be included in your budget:

- Transportation
 - Airfare/Gas/Rental Cars etc...
- Total hotel costs
 - List names and rates per night
- Total allotment for food
 - Include a sampling of the restaurants you are planning to visit
 - Include an average cost per day for food and snacks
- Spending money for souvenirs
 - Include what types of souvenirs you might bring back
- Entertainment cost
 - Include admission costs to any events/sights you plan to attend

- Include names and dates

The Itinerary:

In addition to your budget, you must make an itinerary. An itinerary is a list of all daily activities planned and the times allotted. You can use a Microsoft Word Table for this. Use Day 1, Day 2, etc. as your headings, and then include a listing of what you are doing that day, approximate time spent at place/event, travel times, mealtimes, etc. You may have as many rows and columns as needed. Be sure to include a column that explains why you chose your particular event or sight to visit. When you finish your itinerary you will have a detailed schedule of exactly what you are going to do while on vacation.
